

Schedule of reliability settings

20 February 2018

Purpose of this schedule

The National Electricity Rules (NER) require the Australian Energy Market Commission (AEMC) to calculate the market price cap (MPC) and the cumulative price threshold (CPT) to apply on and from 1 July each year. The AEMC is to complete the calculation by 28 February each year and to publish its calculations on its website as part of a schedule of reliability settings. This schedule is published in accordance with these requirements.

MPC and CPT for the 2018-19 financial year

Applying the requirements under the NER, the AEMC has calculated the MPC and CPT values to apply for the 2018-19 financial year. The current values for 2017-18, and the adjusted values for 2018-19, are shown as follows:

	From 1 July 2017 to 30 June 2018	From 1 July 2018 to 30 June 2019
MPC	\$14,200 / MWh	\$14,500 / MWh
CPT	\$212,800	\$216,900

Details of the calculations are set out in this schedule.

Requirements under the National Electricity Rules

The requirements for the AEMC to undertake the calculations of the MPC and CPT are set out under clauses 3.9.4(c) and 3.14.1(d) of the NER, respectively. Clauses 3.9.4(d) and (e), and 3.14.1(e) and (f) also set out the specific formulae that must be used by the AEMC.

Calculation of the MPC

The method and formula with which the MPC is to be indexed is set out under clauses 3.9.4(d) and (e) of the NER. The AEMC's calculation, in accordance with these provisions, is outlined below.

In accordance with information published by the ABS, the Reliability Settings Index values are:¹

	year c (2017)	year b (2010)
Q ₁	110.5	95.2
Q ₂	110.7	95.8
Q ₃	111.4	96.5
Q ₄	112.1	96.9
sum	444.7	384.4

¹ Full details of the ABS data are set out in Attachment 1.

The following formula is used to calculate the MPC:

$$MPC^x = BV^{MPC} \times \frac{(Q_1^c + Q_2^c + Q_3^c + Q_4^c)}{(Q_1^b + Q_2^b + Q_3^b + Q_4^b)}$$

Where:

MPC is the market price cap in dollars per MWh

x is the financial year for which the MPC is being calculated, which in this case is the 2018-19 financial year

BV^{MPC} is \$12,500/MWh

Q_1 to Q_4 are the values of the Reliability Settings Index² for each of the four quarters of years c and b (as the case may be) as at five months before the start of year x

c is the calendar year commencing 18 months before the start of year x , which in this case is calendar year 2017

b is the calendar year 2010

Clause 3.9.4(e)(1) of the NER also requires the calculated MPC value to be rounded to the nearest \$100/MWh.

Applying these values and requirements, the MPC for 2018-19 is:³

$$\begin{aligned} MPC^{2018-19} &= \$12,500/\text{MWh} \times \frac{444.7}{384.4} \\ &= \$14,460.85/\text{MWh} \text{ (rounded to two decimal points)} \\ &= \$14,500/\text{MWh} \text{ (rounded to the nearest \$100/MWh)} \end{aligned}$$

Calculation of the CPT

The method and formula with which the CPT is to be indexed is set out under clauses 3.14.1(e) and (f) of the NER. AEMC's calculation in accordance with these provisions is outlined below.

² In accordance with clause 3.9.4(d) of the NER, the Reliability Settings Index is the All groups, Australia Consumer Price Index (CPI) found at Index Numbers, All groups, Australia, in Tables 1 and 2 of the CPI, Australia, published by the Australian Bureau of Statistics (ABS) for the relevant quarter, except where that index ceases to be published or is substantially changed, in which case the Reliability Settings Index will be such other index as is determined by the AEMC as suitable.

³ Clause 3.9.4(e)(2) of the NER requires that if the MPC calculated under this clause for year x is less than the MPC for the preceding year (year $x - 1$), then the MPC for year x will be the value of the MPC for year $x - 1$. In this case, as the calculated value of \$14,500/MWh is greater than $MPC^{2017-18}$ (i.e. \$14,200/MWh), $MPC^{2018-19}$ is \$14,500/MWh.

In accordance with information published by the ABS, the Reliability Settings Index values are:⁴

	year c (2017)	year b (2010)
Q₁	110.5	95.2
Q₂	110.7	95.8
Q₃	111.4	96.5
Q₄	112.1	96.9
sum	444.7	384.4

The following formula is used to calculate the CPT:

$$CPT^x = BV^{CPT} \times \frac{(Q_1^c + Q_2^c + Q_3^c + Q_4^c)}{(Q_1^b + Q_2^b + Q_3^b + Q_4^b)}$$

Where:

CPT is the cumulative price threshold in dollars

x is the financial year for which the CPT is being calculated, which in this case is the 2018-19 financial year

BV^{CPT} is \$187,500

Q₁ to *Q₄* are the values of the Reliability Settings Index⁵ for each of the four quarters of years *c* and *b* (as the case may be) as at five months before the start of year *x*, which are the same as those for the MPC calculation above

c is the calendar year commencing 18 months before the start of year *x*, which in this case is calendar year 2017

b is the calendar year 2010

Clause 3.14.1(f)(1) of the NER also requires the calculated CPT value to be rounded to the nearest \$100.

Applying these values and requirements, the CPT for 2018-19 is:⁶

$$\begin{aligned} CPT^{2018-19} &= \$187,500 \times \frac{444.7}{384.4} \\ &= \$216,912.72 \text{ (rounded to two decimal points)} \\ &= \$216,900 \text{ (rounded to the nearest \$100)} \end{aligned}$$

⁴ Full details of the ABS data are set out in Attachment 1.

⁵ In accordance with clause 3.14.1(e) of the NER, the Reliability Settings Index is the All groups, Australia CPI found at Index Numbers, All groups, Australia, in Tables 1 and 2 of the CPI, Australia, published by the ABS for the relevant quarter, except where that index ceases to be published or is substantially changed, in which case the Reliability Settings Index will be such other index as is determined by the AEMC as suitable.

⁶ Clause 3.14.1(f)(2) of the NER requires that if the CPT calculated under this clause for year *x* is less than the CPT for the preceding year (year *x* - 1), then the CPT for year *x* will be the value of the CPT for year *x* - 1. In this case, as the calculated value of \$216,900 is greater than CPT²⁰¹⁷⁻¹⁸ (i.e. \$212,800), CPT²⁰¹⁸⁻¹⁹ is \$216,900.

Attachment 1 – CPI values published by the Australian Bureau of Statistics

ALL GROUPS CPI, Index numbers(a)

Period	Sydney	Melbourne	Brisbane	Adelaide	Perth	Hobart	Darwin	Canberra	Weighted average of eight capital cities
2010									
March	95.2	95.2	95.2	94.6	95.6	95.4	95.4	95.3	95.2
June	95.6	95.8	95.9	95.3	96.5	95.8	96.2	95.6	95.8
September	96.3	96.3	96.9	96.2	96.9	96.8	97.2	96.3	96.5
December	96.7	96.9	97.4	96.5	97.0	96.9	97.1	96.7	96.9
2017									
March	111.3	110.9	110.5	109.1	109.0	108.9	108.5	108.6	110.5
June	111.7	111.0	111.0	109.2	109.0	108.9	108.8	108.6	110.7
September	112.5	111.5	111.4	110.4	109.5	109.2	109.4	109.6	111.4
December	113.3	112.3	112.3	111.2	109.9	110.3	109.7	110.3	112.1

a) Unless otherwise specified, reference period of each index: 2011-12 = 100.0.
