

Submission Type: Rule Change

Reference: Access, pricing and incentive arrangements for distributed energy resources

Organisation: Citizen

First Name: Ray

Last Name: Pentti

Email: [REDACTED]

Phone Number: [REDACTED]

Comments: The government should be encouraging all citizens to take up solar/renewable energy and not penalising us by effectively taxing us for feeding energy to the grid. Solar energy will ease the burden of having to build coal fired power stations in to the future. This alone will save the country monetarily but would also reduce pollution and thus help to curb climate change. Another huge saving that all solar owners contribute to is the reduced need for infrastructure that transmits the power from the power station to the end user. Please don't go ahead with the proposal to charge citizens for feeding energy to the grid. It is imperative that renewable energy is encouraged. This will go a long way to help save the planet
