The biggest driver of price in the next few years will be cheaper gas prices and new and cheaper electricity generation like wind and solar. Demand remains flat so increased power supply from renewables is driving wholesale costs lower.

**OVERALL PRICES**
- Falling 9% FY19 to FY23
- $1337 to $1220

**GENERATION PRICES**
- Falling 28% FY19 to FY23
- $556 to $403

**POLES AND WIRES PRICES**
- Falling 0.7% FY19 to FY23
- $579 to $575

**GREEN SCHEME PRICES**
- Falling 5% FY19 to FY23
- $104 to $99

Cost pressures are continuing to come off consumer bills.

**OVERALL SUPPLY COSTS**
Most Australians can expect to see falling electricity prices over the next three years.

**WHOLESALE**
New generation capacity is entering the system and driving significant falls in wholesale prices.

**NETWORKS**
The cost of connecting new generation to distribution and transmission networks is coming down.

**ENVIRONMENTAL POLICY**
* After mostly increasing over the past decade we have projected for two years running that these costs will drop.

* These costs include the Australian Government Renewable Energy Target and relevant jurisdictional schemes.
