RE: Release of Generator information by AEMO - ERC0112

Dear Dr Tamblyn,

Union Fenosa Wind Australia Pty Ltd is a wind farm developer and planning to be established as an energy utility and operator of our wind farms in the near future. In the National Electricity market we currently have a project portfolio of over 900 MW in various stages of development, with the intention to move to construction progressively from early next year to 2014-15.

In order to ensure timely and efficient establishment of connection agreements for these projects, we consider it essential that the information required to developer generator performance standards is available to us.

It is considered essential that the Rule change proposed by Senergy Econnect Australia be made as a matter of urgency.

We note that the change will result in earlier release of information on the status of Union Fenosa Wind Australia to NEM participants. It is considered that this information will generally be available from other sources, and as such will not be a problem to us.

Please contact Shaq Mohajerani if you have any questions.

Regards,

Shaq Mohajerani
Engineering Manager
