Comments: Not sure where your stats are from , imagination land maybe?

I live in cairns have a small unit with a 2.3 kW system and am lucky if the electric bill is neutral...no one is home during the day on weekdays and I work 12 hr shifts...

It's impossible for any newer system in the last few years to access rebates that make \$ 900 a year even close to possible...and we get much more sun than most!
