Hello. your new solar export charge will make me purchase new technology that will allow me to go off grid...as an ex powerworker in transformers repair that was shut down by campbell Newman I would be happy to spend my money to go off grid as the way we were treated making us redundant has made me sign up with AGL and never buy from Ergon or Energex or origin gas ever again.. You guys need to think about upgrading the transmission lines instead of punishment for home solar generation
