

# Overview of the draft rule: network pricing process

Public Forum: Distribution Network Pricing Arrangements draft determination - 22 September 2014

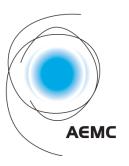

#### **EMMA FISHBURN**

ADVISER
AUSTRALIAN ENERGY MARKET COMMISSION

### **OVERVIEW OF THIS SESSION**

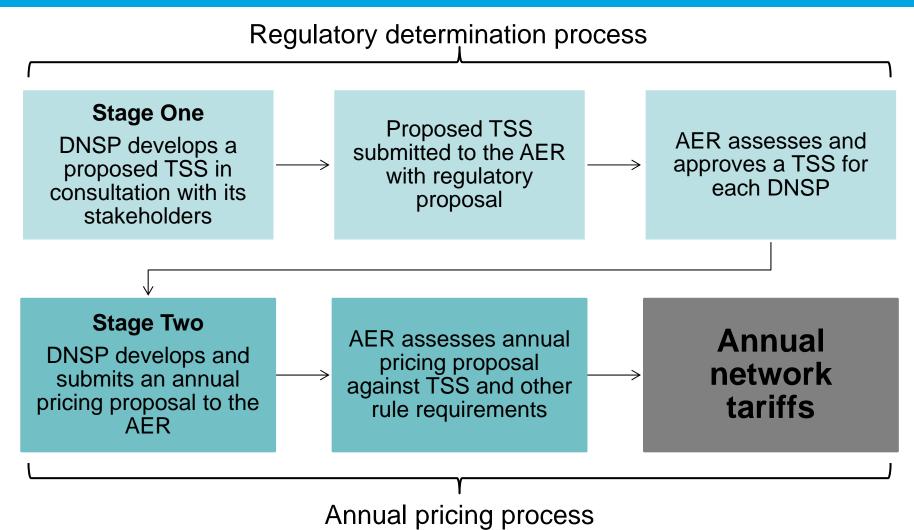

- Provide an overview of the draft new network pricing process.
- Explain the rationale behind some of the changes.
- Responses to the proposed changes from representatives of different stakeholder groups.
- Discussion at the conclusion of the presentations.

## A NEW NETWORK PRICING PROCESS

### THE NETWORK PRICING PROCESS

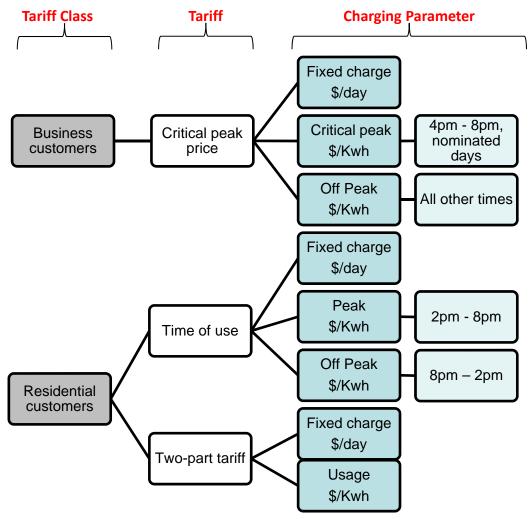

### CONTENT OF THE TARIFF STRUCTURE STATEMENT

DNSPs must include in their TSS:

- Tariff classes.
- 2. Tariff class assignment and reassignment policy and procedures.
- 3. The structure of each proposed tariff.
- 4. The charging parameters of each proposed tariff.
- 5. The pricing methodology.

The TSS must be accompanied by a schedule of indicative price levels for each tariff in the TSS.

### AMENDING A TARIFF STRUCTURE STATEMENT

An event that could not have been reasonably foreseen occurs.

As a result of this event, a DNSP considers that it needs to amend its TSS to better meet the pricing principles.

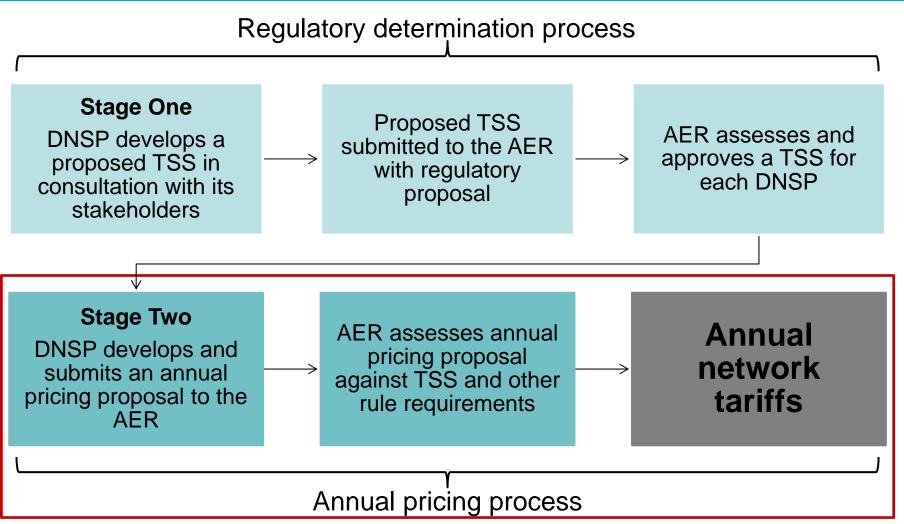

DNSP consults with stakeholders on a request for amendment which is submitted to the AER. The AER must approve the amended TSS if it is satisfied that it better meets the pricing principles.

### EXEMPTIONS TO THE NEED TO AMEND A TARIFF STRUCTURE STATEMENT

- Exceptions to the need to amend a TSS apply where:
  - A DNSP proposes to introduce a tariff mid period where the expected revenue to be recovered from this tariff is less than 0.5 per cent of the annual revenue requirement.
  - Cumulatively, these tariffs do not exceed one per cent of the annual revenue requirement.
- If either of these thresholds are breached, the DNSP must go through the amendment process.
- These tariffs must be incorporated into the TSS at the next regulatory determination process if the DNSP proposes to continue them.

### STAGE TWO – THE ANNUAL PRICING PROCESS

#### THE ANNUAL PRICING PROCESS

- Under the draft rule, the annual pricing proposal must comply with the regulatory determination, the pricing principles and the TSS.
- Network tariffs do not have to match the schedule of indicative price levels, but DNSPs must explain any material differences.
- DNSPs must update their schedule of indicative price levels for the remaining years of the regulatory control period as part of the annual pricing process.

### TIMING OF THE ANNUAL PRICING PROCESS

#### Timeframe for all jurisdictions (except Victoria):

28 February
Any amendments to the TSS approved

**15 March**Transmission prices published

31 March
Annual pricing proposals due to the AER

**15 May** (approx) AER approval of annual tariffs 1 July Network price changes

#### Victorian timeframe:

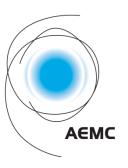

15 May
Transmission prices published

31 August
Any amendments to the TSS approved

30 September
Annual pricing proposals due to AER

15 November (approx) AER approval of annual tariffs

1 January Network price changes
